Instructor: Dawn Thilmany McFadden
Campus Office: B325 Clark **Office Phone:** 491-7220
Email address: thilmany@lamar.colostate.edu
Class Web Site: Available by student account through RamCT
If your course takes longer than one semester, please request audit status in the subsequent semester, as RamCT makes courses available one semester at a time.

Textbook: Barry et al. *Financial Management in Agriculture*. 6th edition. Various linked readings

Course Objective: To develop an understanding of how to use financial statements, ratios and capital investment and valuation methods to make decisions and enhance the financial performance of a firm. Also, to better understand current trends and forces shaping the agricultural sector, with a particular emphasis on farmland markets and the ag credit sector.

Understanding financial concepts and the practical applications of finance is essential for anyone interested in pursuing a career in the agribusiness or agricultural production sectors. Many of the important managerial problems in agriculture involve finance. However, most agricultural production firms are significantly different from corporations, and more closely resemble mid-size, owner-operated businesses. This class focuses on the essentials of financial management with special consideration of those issues where independent farm and operations must be treated separate from corporations but some corporate finance principles are also covered in this course. The financial institutions, lending programs and other financial issues affecting agriculture will also be covered.

Key Objectives

Consider the institutional laws and framework of agribusiness finance, and become better acquainted with the current financial position of US agribusiness, farms and ranches.

Explore how a firm's financial information (line items, statements and ratios) are indicators of performance, and how changes in performance result from the manager's decisions and factors beyond the firm's control.

Explore the role that debt financing plays in a firm's growth and solvency.

Consider investment issues by understanding opportunity costs, tax implications and decision rules in capital budgeting.

Finally, please use the instructor as an educational resource if you have questions or need help in understanding a concept or method for analyzing financial decisions. Online courses are challenging because they are done without a high level of engagement or interaction. But, that does not mean you cannot reach out with questions and for feedback when needed.

GRADING:	Homeworks (2)	50 points
	Quizzes(online)	50 points
	Issue Summaries(with HW 1 and 2)	75 points
	Midterms, 2 @ 100	200 points
	Final Exam	<u>125 points</u>
		500 points
