Instructor: Jordan Suter

E-mail: jordan.suter@colostate.edu

Office Hours (B-306 Clark): Mon. 2–3, Tues. 12–2, and by appointment

Description:

The primary objective of this course is to link microeconomic theory with policy analysis. To accomplish this, we will begin by covering methods for measuring welfare of consumers and producers. Using these measures, we will characterize market outcomes, highlight common types of market failure as well as policy solutions and investigate the implementation of cost benefit analysis. In assessing the implementation of economic policy options, we will discuss distributional and political economy considerations as well as the role of behavioral economics in influencing policy design and assessment. As a critical component of the course, students will be expected to write a research paper assessing the welfare effects of a specific policy or program.

Course Objectives:

1. Learn how to measure welfare outcomes for consumers and producers and identify the magnitude of specific market failures.
2. Develop an ability to rigorously compare the benefits and costs of competing policies or projects, including distributional, behavioral and political economy considerations.
3. Improve ability to conduct original research by critically assessing the welfare implications of a specific economic policy or project.

Readings:

The readings will come from the textbook listed below or made available on Ram CT. The readings that are required for a given class are indicated in the course schedule and will be announced in class. All documents, including the course schedule, problem sets, and exams will be posted on Ram CT.

Grading (out of 100%):

4 Problem sets (10%) – You will be given one week to complete each problem set. Late assignments will not be accepted, however, the lowest grade of the four problem sets will be dropped. You can work on an assignment with, at most, one other classmate, but please only turn in one problem set.

Midterm exams (25%) – Two in-class exams will be given during the semester that will test the material covered in class and the assigned readings.

Final exam (30%) – A comprehensive final exam will be given during the exam period.

Research paper and presentation (30%) – In this paper you will investigate a research question related to the welfare effects of a particular policy or program. The paper should include a literature review, a description of the theoretical incentives faced by producers and consumers, as well as how economic welfare related to the policy could be measured. Ideally the paper will also include some empirical analysis related to the welfare effects of the policy. Finally, the paper should include a
discussion of how the policy or project could be improved in the future. Students will present their research results to the rest of the class during the last two weeks of the semester.

**Participation and feedback on readings (5%)** – Participation in all class discussions is valued. We will cover at least one reading from the literature each week and for each reading one/two student(s) will be assigned to lead the class discussion.

**Academic Integrity:**

This course will adhere to the Academic Integrity Policy of the CSU General Catalog and the Student Conduct Code. I expect all work that you do in the course to be your own, with the exception of problem sets, where you can work with one other student. Cases of plagiarism in written work will be taken seriously, so please familiarize yourself with CSU’s guide to avoiding plagiarism ([http://writing.colostate.edu/guides/researchsources/understandingplagiarism/plagiarismoverview.cfm](http://writing.colostate.edu/guides/researchsources/understandingplagiarism/plagiarismoverview.cfm)).

**Resources for Disabled Students:**

If you have a documented disability and wish to discuss academic accommodations, please contact me as soon as possible to set up appropriate arrangements. Further info- [http://rds.colostate.edu/students](http://rds.colostate.edu/students)

**Course Outline:**

Weeks 1 – 3: *General equilibrium analysis* - Pareto efficiency, Kaldor-Hicks criterion, social welfare functions.

Weeks 4 – 8: *Welfare measurements* – measuring welfare for consumers, producers, and factor owners, aggregation and welfare analysis of market policies.

Weeks 13 – 15: *Behavior and political economy* – experiments for policy evaluation, considerations from behavioral economics and political economy.

Weeks 15 – 16: *Student presentations*
