

Pesticide Record Keeping Form

for Private Applicators

Extension

Field Name: _____

Location: _____

Crop: _____

Applicator Name	<i>John Doe</i>				
Applicator Certification #	<i>123456</i>				
Application Date	<i>EXAMPLE 4/25/2010</i>				
Brand Name	<i>Balance Pro</i>				
EPA Registration #	<i>264-600</i>				
Acres Treated	<i>120</i>				
Total Amount	<i>360 oz</i>				
Application Time	<i>1:30 pm</i>				
REI	<i>12 hrs</i>				
Active Ingredient	<i>isoxaflutole</i>				
Nozzle	<i>XR 8002</i>				
Rate	<i>3 oz/A</i>				
GPA	<i>20</i>				

The first 7 rows and field name and location are required for RUP application records. Gray rows are additional information required for WPS compliance. Other information is optional.

Pesticide Record Keeping Form Instructions

for Private Applicators

Record Keeping Requirements for Restricted Use Pesticide (RUP) Application

Your records must include:

Note: Dittos are NOT allowed in record keeping!

- Name and certification number of applicator (MUST be recorded for each and every application!)
- Application date (day, month, year applied)
- Brand or product name
- EPA registration number
- location of application
- crop, stored product, commodity, or site treated
- size of area treated (or spot treatment)
- total amount of pesticide applied (rate x area applied)

These records must be recorded within 14 days of the application and maintained for three years following the pesticide application.

The tables on the other side of this sheet provide space for you to record the brand name, active ingredients, and EPA registration number of commonly used RUPs. Other chemicals may be designated as RUPs at any time. Check the pesticide label or visit with your dealer to obtain this information.

Description of Required RUP Records

Location of treated area: You must be able to locate the field three years following application. The law suggests any of the following designations:

- county, range, township, and section
- maps or written descriptions
- a USDA identification system such as those used by the Farm Services Agency or NRCS which involves maps and a numbering system to identify field locations
- the legal property description

Brand name: The product's trade name.

EPA registration number: The Environmental Protection Agency has placed a number on all chemicals identifying, which chemical is used. This number is located on the label of the product used.

Acres treated: The number of acres in which chemicals were used.

Total amount: Total amount of pesticide used, *not* the quantity after water or other substances were added.

Record units as specified on the label (pints, ounces, pounds).

Total amount = rate x area applied

Information Required for Worker Protection Standard (WPS) Record Keeping

In addition to the required RUP records, you may want to record the following information for compliance with WPS.

- Application time
- Restricted Entry Interval (REI)
- Active ingredient(s) of product applied

Required WPS records that are also required for RUPs are *application date, application location, brand name, and*

EPA registration number.

Other useful, but optional information that you may need to record for future reference on the second individual field record page includes:

- application rate of chemical
- gallons per acre (GPA)
- additive
- nozzle type
- wind speed and direction
- air temperature

Extension programs are available to all without discrimination. To simplify technical terminology, trade names of products and equipment occasionally will be used. No endorsement of products named is intended nor is criticism implied of products not mentioned.

Produced by the Colorado Environmental Pesticide Education Program (CEPEP), with Thia Walker, Claudia Arrieta, Troy Bauder, and Helen Skiba, September, 2010.
