

# Food Industry Management

This interdisciplinary minor provides a platform for students to integrate business principles with applied food management courses. Areas of study in the minor include food products marketing, food supply chain and cost management, food safety management, food law and policy. The courses in this minor will explore topics relevant to a multitude of operators across the modern food system, including farms, agribusiness firms, food processing, distribution, retail and service industries, consumers and regulatory agencies (at the local, state, federal level). Courses with an asterisk are offered online in that semester as well as on campus.
