

RSTOR – Connecting from Windows 10 Computers

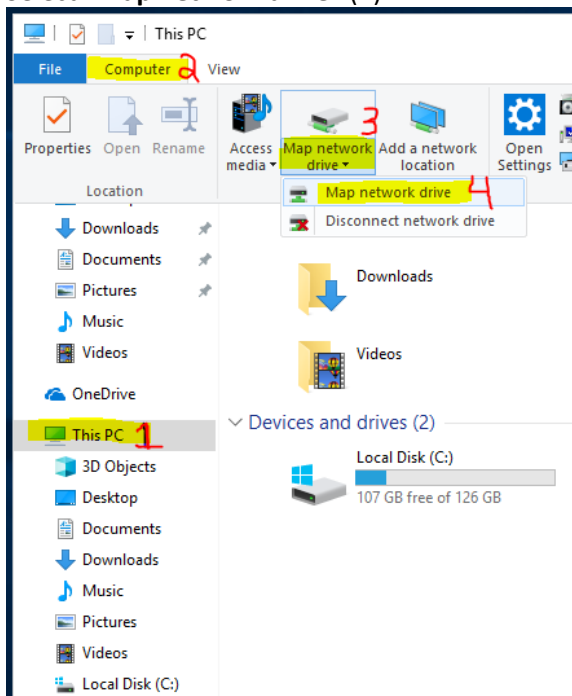

Instructions for connecting a personal (non-CSU/non-CAS domain joined) Windows 10 computer to RSTOR.

Note: Users need to be on campus and on the CSU network (hardwired or wirelessly with CSU-EID), or connect from off campus by first using the Pulse Secure VPN.

- Open a **File Explorer** window

- Click on “**This PC**” on the left (1)
- Click on the “**Computer**” tab on the top menu bar (2)
- Click on the “**Map network drive**” icon (3)
- Select “**Map network drive**” (4)

- Select the R: drive from the “**Drive**” dropdown menu, if it is available. If R: is unavailable, you may pick any unused drive letter you prefer.
- For the “**Folder**” field, type the RSTOR address ending with your *<unique_lab_id>*, which will have been provided by CASIT during the initial setup of your RSTOR drive.
 - Format for the address is: `\\campusrstor1.onefs.colostate.edu\cas\<unique_lab_id>`
- Check both the boxes “**Reconnect at Sign-in**” AND “**Connect using different credentials**”.
- Click the “**Finish**” button

- When prompted for credentials, use your **eID** and **eID password**
 - Username: **colostate\your_EID**
 - Password: **your_eID_password**
- Check the “**Remember my credentials**” if you trust saving this information on your personal computer. Do not check this box on a shared computer, for security reasons.

You should now be connected to RSTOR!

- If you have issues connecting, please submit a work order to AgHelpDesk@colostate.edu
