## MAKING BETTER DECISIONS

2009 Colorado Sunflower  
Variety Performance Trials

## Acknowledgments

The authors express their gratitude to the Colorado farmers and to Merle Vigil at the USDA Central Great Plains Research Station who generously contributed the use of their land, equipment, and time to conduct these trials for the good of all Colorado sunflower producers:

- Akron – USDA Central Great Plains Research Station
- Brandon - Burl Scherler
- Idalia - Dennis Towns (Triple T Farms)
- Stratton – Shulte Bros. Farms

We are grateful for the funding support received from the Colorado Sunflower Administrative Committee (CSAC) to conduct the Colorado Sunflower Variety Performance Trials. In addition, we want to thank Triumph Seed Co., Inc. for conducting the sunflower seed oil content analyses and to Red River Commodities, Inc. for sunflower seed-sizing analyses.

Research conducted by Colorado State University Crops Testing Program  
Department of Soil and Crop Sciences  
Crops Testing Program  
Colorado State University Extension  
Colorado Agricultural Experiment Station.

# 2009 Colorado Sunflower Hybrid Performance Trials

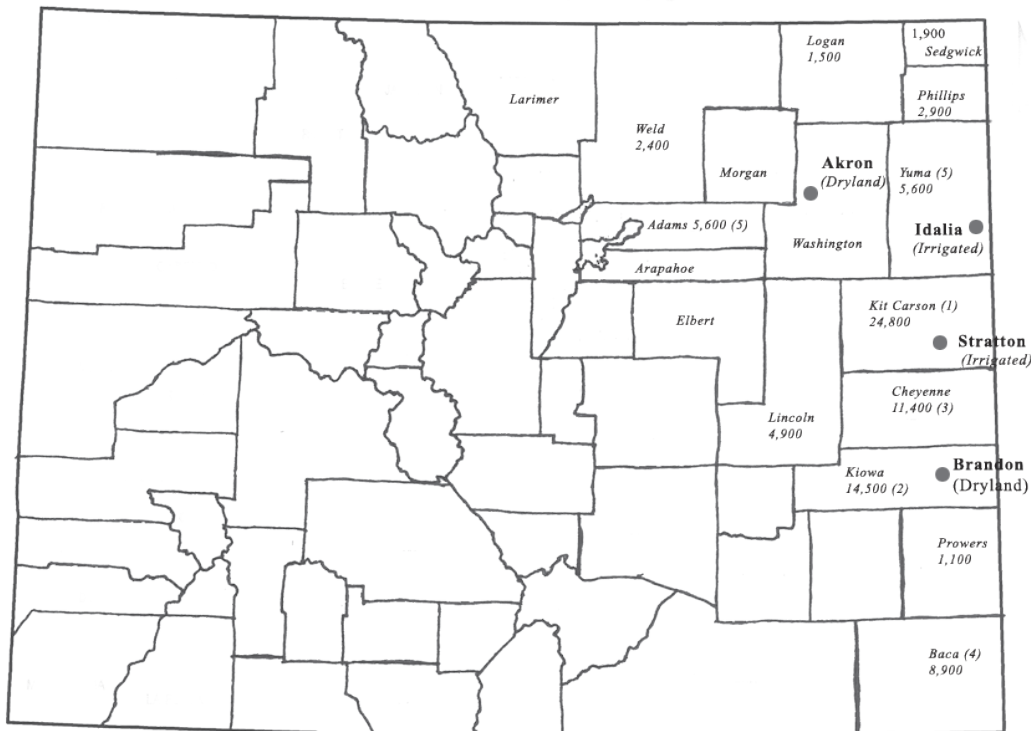

## Introduction

CSU's Crops Testing personnel assists Colorado sunflower producers to make the best possible hybrid sunflower seed selection by providing unbiased and reliable yield trial results from oil and confection sunflower performance trials. Variable climatic conditions, innovations from biotechnology, acquisitions and mergers of seed companies, and rapid development of new hybrid lines means that unbiased crop performance information is increasingly important to Colorado sunflower producers.

Each year, Colorado sunflower producers purchase over \$4 million of seed which means that good variety performance information is essential to making better sunflower variety decisions.

Colorado State University personnel evaluated commercial oil and confection sunflower hybrids under irrigation at two locations and in two dryland locations. The dryland oil and confection trials at Brandon, Kiowa County, were lost this year due to heavy damage from deer. The results from the other trials are presented in the following tables with the exception of the irrigated confection trial at Idalia which was lost to damage from different animals and hail. These tables are intended to be stand-alone and self explanatory. Personnel and operational costs for conducting these trials come from Colorado State University, the Colorado Sunflower Administrative Committee, and sunflower seed company entry fees.

**Four Colorado sunflower trial locations in 2009 and the 2006 acreage harvested.**

## 2009 Irrigated Oil Sunflower Variety Performance Trial at Idalia<sup>1</sup>

Company	Hybrid	Grain			Plant			Oil Content %

LSD <sub>(0.30)</sub>		209					
LSD <sub>(0.05)</sub>		400					

LSD0.30 is most useful for producers using these results to select a variety but some collaborators find LSD0.05 useful.

Experimental Design: randomized complete block design with four replications

Plot size: 5' x 31'

**Site Information**

Collaborator: Triple T Farms  
 Soil type: Colby silt loam  
 Previous crop: Pasture  
 Planting Date: 6/26/2009  
 Seeding: Over planted and thinned to a target of 15,000 plants/ac  
 Fertilization: N-P-K (60-14-0)  
 Herbicide: Sonalan, Dual II, Roundup  
 Harvest Date: 11/6/2009 and 11/10/2009

Note: Field received hail in late July but plants recovered well.

*Vials corrected to 10% moisture*

Experimental Design: randomized complete block design with 3 replications

Plot size: 10' x 170'

### Site Information

Trial conducted at the Southwestern Colorado Research Center in Yellow Jacket, CO

Soil type: Weatherhill silty clay loam

Previous crop: Summer fallow

Planting Date: 6/2/2009

Seeding rate: Target 15,563 seeds/ac

Rain (Jun-Oct): 3.29 in (gross amount) or 43% of normal

Fertilization: N-P-K (50-20-0) on 5/1/2009

Herbicide: Sonalan @ 2.0 pt/ac on 5/6/2009

Deer repellent: PlantSkydd on 7/17, 8/04, and 8/18/09

Harvest Date: 11/4 & 11/5/2009

Seed yields corrected to 10% moisture

Comments: Summer precipitation was well below average but good soil moisture at planting helped achieve decent seed yields.

Triumph hybrid s655 incurred substantial deer, elk, and bird damage.

\* Not available for sale

Planted: May 7, 2009

Harvested: September 25, 2009

Seeding rate: 25 lb/ac in 12" row spacing

Previous crop: Summer-fallowed in 2007 and 2008

Fertilizer: 50 lbs N/ac + 20 lb P<sub>2</sub>O<sub>5</sub>/ac on 5/1/09

Herbicide: Sonalan @ 2 pt/ac PPI on 5/6/09

Precipitation (rain + snow):

Jan.-Apr.: 1.8 in. (40% of normal)

May-Sept.: 4.4 in. (67% of normal)

Planting to harvest: 4.1 in. (65% of normal)

Comments: Soil moisture at planting was excellent, partly because the ground was summer-fallowed for two consecutive years. Pre-season precipitation was below average as was July and August rainfall. Seed yields were comparable to last year's. None of the entries lodged. Seed shattering was negligible. Grasshoppers were plentiful in the area but did not seem to cause much damage to safflowers.

A handwritten signature in black ink that reads 'Jerry Johnson'.
