

### **Potential New Undergraduate Major**

Dear Graduate Teaching Assistant: Please read the following message to students in your lab or recitation sections. Please gather and send to Dr. Brown the names of students who show interest in helping with the development of a new major. We hope students will contact Dr. Brown directly, but the list you provide will be a backup in case responses are low and/or slow.

The Department of Bioagricultural Sciences and Pest Management is considering a new major and would like to have your input. They need to know what is important to students like you so they can create a major that students want and will prepare them for success. BSPM invites you to take an hour long study break with them before the end of the semester to eat some pizza and share your ideas. If you are interested, let your TA know and contact Dr. Brown at [cynthia.s.brown@colostate.edu](mailto:cynthia.s.brown@colostate.edu) or 970-491-1949 right away.
