^b LSD (P<0.30)			3.6			

^aVirus score reflects overall reaction (1=resistant to 9=susceptible) to wheat curl mite-transmitted viruses, which may include wheat streak mosaic virus, Triticum mosaic virus, and High Plains wheat mosaic virus.

^bIf the difference between two variety yields equals or exceeds the LSD value, there is a 70% chance the difference is significant. Variety yields in bold are in the top LSD group.

Site Information

Collaborator: Gary Mulch
 Harvest date: July 17, 2019
 Planting date: October 3, 2018
 Soil Type: Kuma-Keith silt loam
 GPS Coordinates: 39.21465, -102.13837
 Trial Comments: Planted into tilled corn residue about 1.25" deep. Plants looked good, albeit small in mid-May. Limited-irrigation applied during the season and the late date of planting contributed to low yield. Wheat streak mosaic virus symptoms were severe in the trial by mid-May and significantly affected grain yield.
