<sup>a</sup> LSD (P<0.30)			2.9		

<sup>a</sup>If the difference between two variety yields equals or exceeds the LSD value, there is a 70% chance the difference is significant. Variety yields in bold are in the top LSD group.

**Site Information**

Collaborator: Andrews Brothers Farms  
 Harvest date: July 13, 2019  
 Planting date: September 19, 2018  
 Soil Type: Haxtun sandy loam  
 GPS Coordinates: 40.19067, -102.66108  
 Trial Comments: Planted about 2" deep into wheat residue with a little moisture. Very good stand establishment and lush fall growth. Trial was dry after planting until October when consistent moisture was received throughout the month. Late fall through early spring was generally dry. By mid-May the trial looked drought stressed with leaves rolling. The end of May was wet with 2.8" of moisture received during the latter-half of the month and rainfall continued into June. Trace amount of stripe rust noted on susceptible varieties by early June and was noted at low levels across varieties (along with leaf rust) at the end of June.
