<sup>b</sup> LSD (P<0.30)			2.5	0.8		

<sup>a</sup>Varieties with positive values headed later than the trial average and varieties with negative values headed earlier than the trial average

<sup>b</sup>If the difference between two variety yield or test weight values equals or exceeds the LSD values, there is a 70% chance the difference is significant. Variety yield and test weight in bold are in the top LSD group.

**Site Information**

Collaborator: Stulp Farms

Harvest date: July 1, 2020

Planting date: September 13, 2019

Soil Type: Manvel silt loam

GPS Coordinates: 38.00624, -102.61455

Trial Comments: Planted (dusted-in) about 2.5" deep. Planted into wheat stubble (fallow prior year). Stands were fair overall and plants did not tiller much in the fall. Trial looked drought stressed in early spring, which worsened into May and June. Freeze damage from mid-April hard freeze was minor and mostly to leaves.
